## Symposium

Where

Panofsky Auditorium, SLAC

When

July 19th

Time	Speaker	Talk title	Affiliation
3:30-3:45pm	Devon Conradson	Science and Diversity: the Ultimate Entanglement	SLAC
3:45-4pm	Meriam Berboucha	A girl in a physics world	SLAC/Imperial College London
4-4:30pm		BREAK	
4:30-5:30pm	Susan Wojcicki	Silicon Valley Adventures: entrepreneurship, video and diversity	YouTube

What

The SLAC/LCLS Diversity, Inclusion, and Youth Engagement in STEM Symposium is being organized with the goal of equipping our future generation with the tools and knowledge they will need to help *diversify* the fields they will be leading, making those environments more *inclusive*, and encouraging future youth to do the same. A series of influential speakers will be invited to give talks about their experiences - see next page for a summary of our upcoming speakers.

You can find out more information about the upcoming talks with this QR code.

## Symposium

Devon Conradson

### Science and Diversity: The Ultimate Entanglement

I'm a rising senior attending Lewis and Clark College in Portland, OR. My field of interest is biochemistry and molecular biology. My inspiration in advocating for diversity and inclusion came from my various college experiences. I always knew that I was different from most, but I had never felt my skin until I attended college. Questions like, "which side of your family do you identify most with--white or colored?" and the various remarks made about the color of my skin and my racial background made me feel even more different. Talking with others who come from minority groups- women, other POCs, those from the LGBTQ+ community, and others- inspired me to do more to promote equity and diversity and has helped me understand myself.

Meriam Berboucha

### A girl in a physics world

I'm a physicist that is currently studying for an MRes in Photonics from Imperial College London. But, I am completing my masters project at SLAC National Accelerator Laboratory where I'm working with super short and powerful lasers! I'm also a keen science communicator and vlogger who's caught the physics bug and would like others to catch it too! I was named the UK Young Face of Fusion 2016 for EUROfusion, a Very Early Career Physics Communicator finalist from the Institute of Physics and am a regular writer for Forbes. I also let the world hear my voice on Science Mixtape on Soho Radio. As a woman of color, I am a minority in a minority, or a *minority squared*, if you like, in my field and I use my platforms to help others realize that science is global and for everyone.

SLAC

Susan Wojcicki

### Silicon Valley Adventures: entrepreneurship, video and diversity

Susan is the current CEO of YouTube and has been since February 2014. - need we say anymore! She has a BA/BSc from Harvard University, a MS from the University of California and MBA from the Anderson School of Management. Susan was ranked #6 on the Forbes list of the World's 100 Most Powerful Women and is currently #41 on Forbes list of America's Self-Made Women. Her father was a physics professor at Stanford University and she grew up in Stanford. Before YouTube she was the senior vice president of Google. She's revolutionised YouTube is a shining star in the technology world - a huge inspiration!
